1 Result

The following equation shows a simple calculation of the total latency. As shown in Equation (1), the total latency is the sum of the individual latency values.

$$L_{\text{total}} = \sum_{i=1}^n L_i \quad (1)$$

Table 1 summarizes the example results.

Table 1: Example result summary

Item	Value
Average latency	193.75 ms

The equation provides a mathematical representation of total latency, while Table 1 gives a compact summary of the corresponding results.
